# IOWA CLIMATE REVIEW

VOLUME 31, NUMBER 4  
APRIL 2017

The cooperation of the National Weather Service offices at Davenport, Johnston (Des Moines), La Crosse, Sioux Falls and Valley (Omaha) and their network of volunteer weather observers across Iowa in providing the data used in compiling this report is gratefully acknowledged.

CONTENTS	
Monthly Narrative .....	1
Monthly Graphs .....	2
Wind Data .....	3
Summarized Station Data .....	4
Daily Temperatures .....	8
Daily Precipitation .....	15
Daily Snowfall & Snow Depth .....	18
Station Index .....	20
Reference Notes .....	22

The climatic data used in this report are compiled from official records on file at the State Climatologist Office in Des Moines. Some of these data are of a preliminary nature and are subject to change without notice. Differences may exist in data values published here and those subsequently published in the U.S. Department of Commerce report *Climatological Data Iowa* due to use of differing quality control procedures.

## IOWA MONTHLY WEATHER SUMMARY – APRIL 2017

General Summary. Iowa temperatures averaged 50.8° or 1.9° above normal while precipitation totaled 3.89 inches or 0.38 inches above normal. This ranks as the 23<sup>rd</sup> warmest and 35<sup>th</sup> wettest April among 145 years of records. A warmer April was last recorded in 2012 and a wetter one in 2013. This was the 13<sup>th</sup> consecutive April with a statewide average precipitation amount in excess of the historical April average of 3.05 inches (1873-2016).

Temperatures. Warmer than usual weather prevailed for 16 of the first 20 days of the month, averaging 6.3° above normal. However, cloudy, wet and cold weather prevailed late in the month, particularly for the final five days of April which averaged 11.6° cooler than normal. Temperature extremes for the month varied from a high of 84° at Lamoni on the 19<sup>th</sup> to a low of 20° at Battle Creek on the morning of the 7<sup>th</sup>. However, probably the most significant temperature event of the month was a hard freeze across most of the northern one-third of Iowa on the morning of the 28<sup>th</sup>. Temperatures fell to 22° at Mason City and Spencer. While freezes are not uncommon at this time of year in northern Iowa the mild weather prevailing for much of the late winter and early spring accelerated development of horticultural crops and may have left them more susceptible to freeze damage. Meanwhile, a handful of locations in far southern and extreme eastern Iowa have not recorded a freeze since March 22.

Heating Degree Day Totals. Home heating requirements, as estimated by heating degree day totals, averaged 14% less than usual

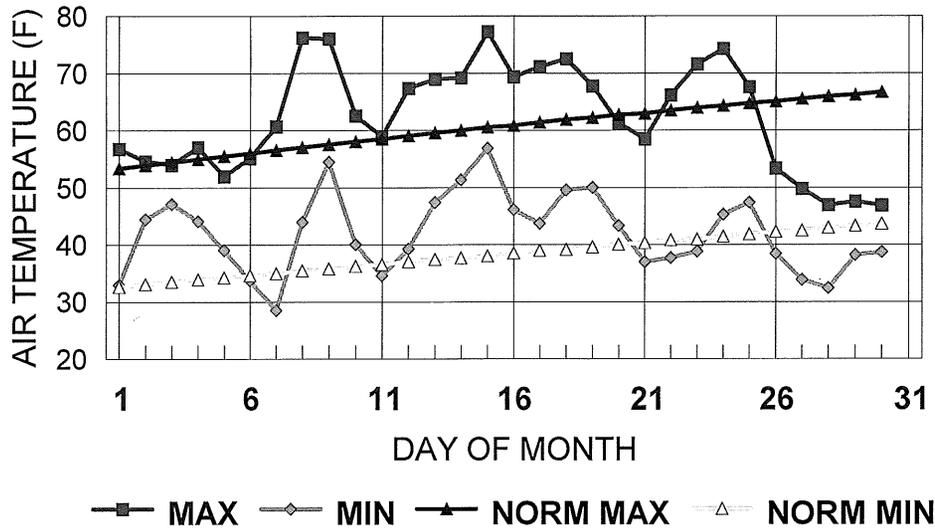

during April and 7% less than last year. Heating requirements thus far this season (since July 1, 2016) are running 16% less than normal and 2% less than last season at this time.

Precipitation. April precipitation totals varied from 1.88 inches at Estherville to 7.85 inches at Chariton. With a few exceptions, rain totals were below normal over most of northwest and west central Iowa, roughly north and west of a line from Council Bluffs to Ames to Forest City. At Chariton a higher April precipitation total has been recorded only twice (1897 and 1991) among 123 years of data.

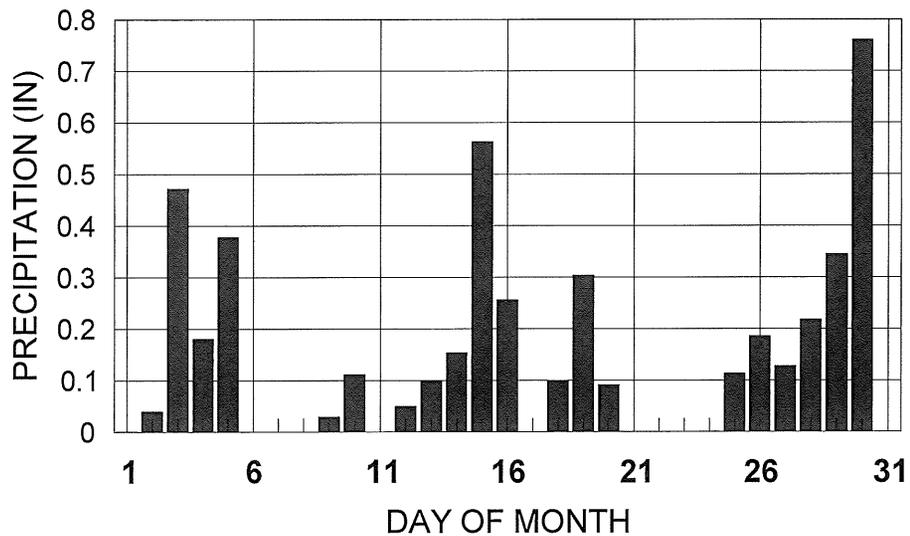

Severe Weather. There were three severe weather outbreaks during the month. The most widespread event came on the evening of the 15<sup>th</sup> with severe weather, mostly in the form of large hail, reported from 28 counties with hail to baseball size in Black Hawk and Plymouth counties. Another event on the night of the 9<sup>th</sup> generated severe weather reports from 15 counties, again mostly in the form of hail, with largest hail of 2.5 inches in diameter from Mitchell County. Finally, one last event on the evening of the 19<sup>th</sup> brought severe weather reports, mostly high winds, to eight counties.

# REFERENCE NOTES

## DEFINITIONS

**STATION NAMES:** Name of the city or locality. Figures and letters following the station name indicate the distance and direction from the post office or town community center.

**NORMALS:** The average of the meteorological element over the period from 1981 to 2010. Normals are calculated by the National Climatic Data Center and are revised once every 10 years. The precipitation and snowfall normals are strictly an average of the values recorded during the 1981-2010 period. However, temperature and degree day normals may have been adjusted to better correspond to the current (as of 2010) temperature measurement practice and thus may vary slightly from the average of the original 30-year values.

**DEGREE DAYS:** One heating (cooling) degree day is accumulated for each whole degree that the daily mean temperature [average of the daily maximum and minimum air temperature] is BELOW (ABOVE) 65°F. Degree days are used to provide a measure of the effect of temperature upon energy consumption for heating or cooling of homes or buildings. The greater the heating (cooling) degree day total, the greater the amount of energy needed to heat (cool) your home or building.

**PRECIPITATION:** Values shown in hundredths of an inch are water equivalent totals, i.e., total of liquid (rain) and melted frozen (snow, sleet, hail) precipitation. The snowfall data tables include the unmelted depth of snow and sleet in tenths of an inch. The depth of snow on the ground (SN ON GROUND) refers to the depth of all snow or ice (new or old). This 'Snow on Ground' value is the depth of snow on the ground at the time of the precipitation observation at all stations *except*: Burlington, Davenport, Des Moines, Dubuque, Mason City, Moline, Omaha, Ottumwa, Sioux City and Sioux Falls Airports where the snow depth is measured at 6 a.m. CST while the new snowfall is that for the 24 hour period ending at midnight. Daily precipitation and snowfall amounts are for the 24 hours ending at the time of observation (given in the 'OBS TIME' column). An asterisk in the daily precipitation table indicates that the rain gage was not read that day. A multi-day precipitation total is included in the amount immediately following the asterisks.

**TEMPERATURE:** The daily maximum (MAX) and minimum (MIN) temperatures are recorded for the 24 hours ending at the time of observation. The significance of the time of observation in interpreting these data is discussed in the preceding paragraph.

**TIME OF OBSERVATION:** At most locations measurements of temperature and precipitation are made only once daily at the same hour of the day. This time is referred to as the 'Time of Observation' and is given in the 'OBS TIME' column of the data tables. All observations, unless otherwise noted, are for the 24 hour period ending at the time of observation. Note that in most cases the resulting data are not for calendar day (i.e., midnight-to-midnight) periods and further that the temperature observations may be made at a different time than the precipitation observation at the same station. See the PRECIPITATION paragraph in this section for a further explanation of the significance of the time of observation. All times are expressed on a 24-hour clock (i.e., 7 a.m. = 7; 5 p.m. = 17; midnight = 24, etc.).

## SYMBOLS USED IN THE DAILY AND MONTHLY DATA TABLES.

'    ' Underlined data in the daily temperature, precipitation and snowfall tables indicates that the data in question has been estimated. Estimated data are provided when the original measurements are not available or are of suspect accuracy.

*ITALICS.* Data given in italics in the daily precipitation or snowfall tables indicate that the date on which the precipitation was reported has been changed from what was given on the original reports.

'+' A plus sign in the monthly summarized data tables indicates that the temperature or precipitation extreme given also occurred on one of more earlier dates during the month.

**BLANK ENTRIES:** Blank entries in the monthly summarized data table indicates that no data are available. Blank entries in the daily precipitation and snowfall data tables indicates that no precipitation was recorded. M = missing, no data recorded.

## ABBREVIATIONS:

TMP DEP NOR: Temperature departure from the 1981-2010 normal.

EXT MAX: Extreme maximum temperature for the month and the day on which it was measured.

EXT MIN: Extreme minimum temperature for the month and the day on which it was measured.

MAX 90+: Number of days with maximum temperatures which were greater than or equal to 90°F.

MAX 32-: Number of days with maximum temperatures which were less than or equal to 32°F.

MIN 32-: Number of days with minimum temperatures which were less than or equal to 32°F.

MIN 0°: Number of days with minimum temperatures which were less than or equal to 0°F.

16/17 SEAS: 2016-2017 season (July 1, 2016 through the end of the published month).

NOR SEAS: Normal number of degree days through the end of the published month.

DEP NORM: Monthly precipitation total departure from 1981-2010 normal.

EXT DAY: Extreme one-day precipitation amount and the day on which it occurred.

.01+: Number of days with precipitation of 0.01 inch or greater.

.10+: Number of days with precipitation of 0.10 inch or greater.

1.00+: Number of days with precipitation of 1.00 inch or greater.

MAX ON GRD: Maximum depth of accumulated snow on the ground (inches) and the day on which it was measured.

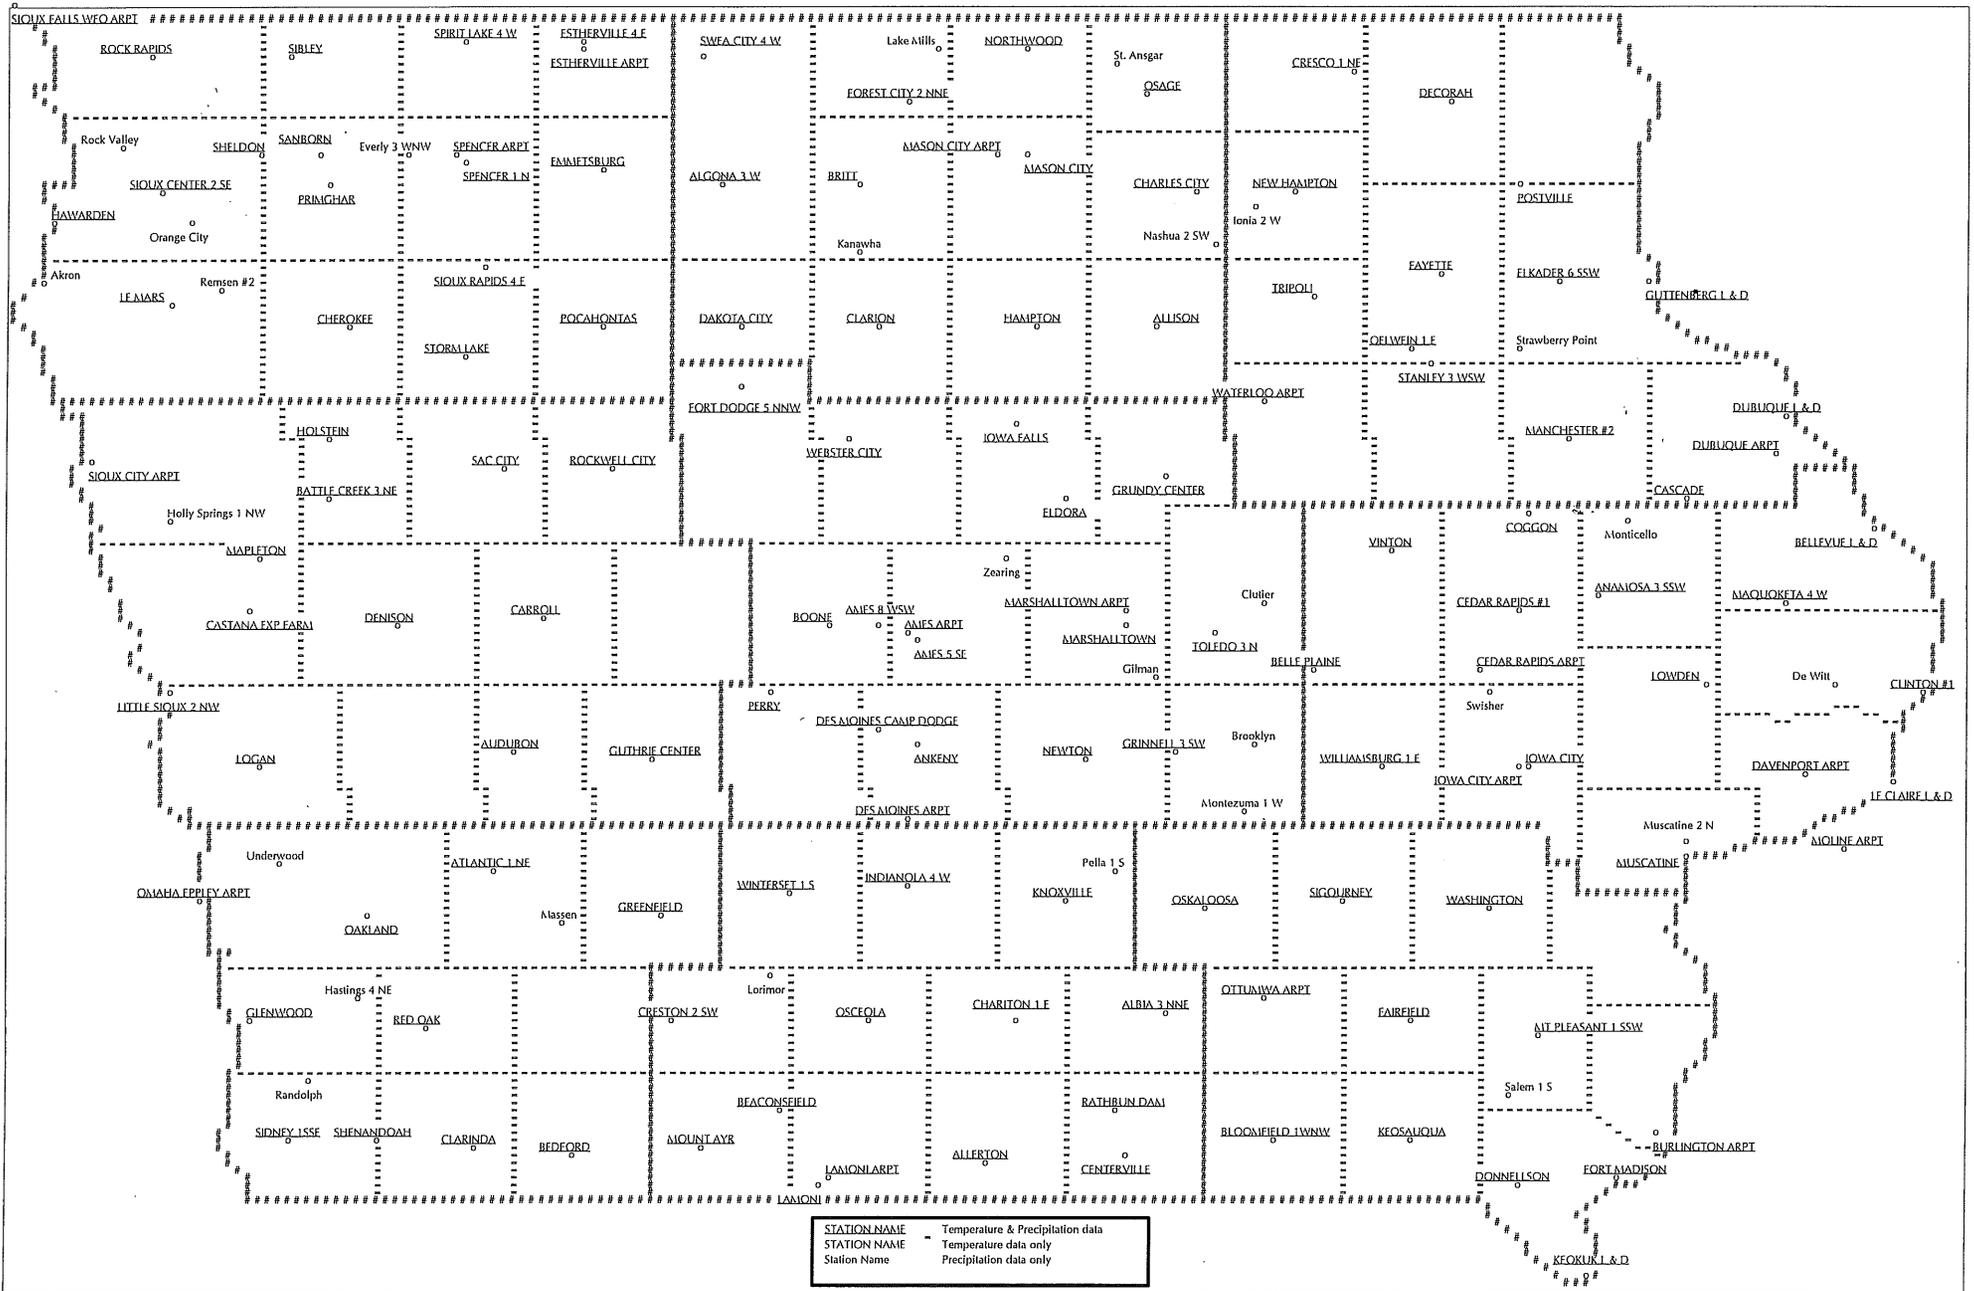

OBS TIME: Observation Time: The time (24-hour clock) at which the daily temperature and/or precipitation measurement is made (7 = 7 a.m.; 17 = 5 p.m.; 24 = midnight).

DIV: Climate Division: NW = northwest, NC = north central, etc.

LAT: Latitude in degrees and minutes north.

LON: Longitude in degrees and minutes west.

T: Trace: < 0.005" of precipitation; < 0.05" snowfall or < 0.5" snow on ground.
